

a vision of **AIR QUALITY**

Our aim is to become the leading Air Quality consultancy service. We will be able to take on projects of any size thanks to scalable tools, reports and visualisations. We will lead the way in use of the latest modelling and data visualisation techniques, all the time innovating to support our customers.

BUILDING CAPABILITY

Using tools such as R/Github/GIS/Office365 to:
Improved modelling capabilities, speed and make maximum use of available data.

Create clearer, more engaging and professional outputs; interactive apps/maps instead of reports.

Indoor AQ, Dust and Odour

Indoor AQ is an emerging area that we have experience of already. Dust and Odour monitoring is dominated by established names and has potential for innovative approaches.

Sharing data in reproducible and efficient ways, both internally and open access

More and more companies are realising the benefits of making data open access, with the focus being on the outputs rather than the data itself.

WORKING TOGETHER

Working with other Hydrock teams

Such as Acoustic, Geo/Flood/Land, M&E, and transport to develop mapping datasets and connected tools and share knowledge.

Working with external organisations

Local authorities, central government, governing bodies who are helping to shape the guidance for our work.

Improve access to data as a whole, through Open Data principles

Making data easier to access improves the ability of others to use it.

Work with clients who value these approaches

IMPROVING VISIBILITY

Articles, presentations; internally as well as externally

Explaining what we are doing to other teams within Hydrock and conveying our ideas and to the public and organisations we are keen to work with.

Online tools, apps/maps

Create useful online tools that help people out and draw them to our brand.

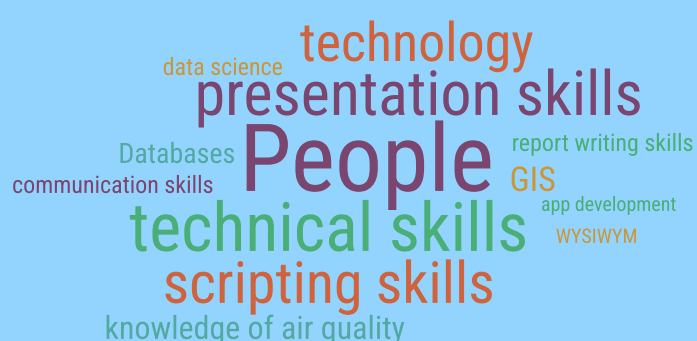

Online datasets

Processed existing open source datasets such as OS Open buildings data with height and land-use information, historic Environment Agency rainfall data etc.

Doing a thorough and honest job every time

We want to exceed expectations and create a reputation as a trusted consultant

What is needed:

Air Quality is already one of the strongest performing businesses in Hydrock and will go from strength to strength as we recover from the pandemic. There is a huge opportunity to do things differently in a sector that is dominated by established names and attitudes. The air quality team is already different, progressive and innovative.
